
 wherein said barrier material (B) comprises at least one selected from the group consisting of EVOH copolymer, polyamide, aliphatic polyketone, polyester, and a combination thereof;

and wherein said barrier material (B) is applied to said surface with at least one method selected from the group consisting of flame spray coating, rotational molding, fluidized bed coating, and electrostatic coating.

11. (Amended) The shaped article as claimed in claim 10, wherein the substrate is a product of injection molding.

 15. (Amended) The shaped article as claimed in claim 10, wherein said substrate is comprised of a co-extrusion blow-molded fuel container that comprises an interlayer of barrier resin (D) and inner and outer layers of said polyolefin (A).--

Please add the following new claims:

--22. (New) The shaped article as claimed in claim 10, which is in the form of a container having an opening, said opening having at least one cut edge, and said edge further comprises a layer of said barrier material (B).

 23. (New) The shaped article as claimed in claim 10, wherein said substrate is a blow-molded or co-extrusion blow-molded container having a pinch-off part cutting face, and at least a portion of said surface comprises said cutting face.

24. (New) The shaped article as claimed in claim 10, wherein said substrate is a blow-molded or co-extrusion blow-molded container having at least one opening, wherein said opening comprises a cut edge, wherein at least a portion of said surface comprises said cut edge.

25. (New) The shaped article as claimed in claim 10, which is in the form of a tube.

3
P. 1000

26. (New) A fuel container, comprising the shaped article as claimed in claim 10.--
